Title: **INFORMATION RICH LIBRARIES**

BOX MISSING PARTS

Commissioner for Patents and Trademarks  
Washington, D.C. 20231**PRELIMINARY AMENDMENT**

Applicants respectfully request entry of the following preliminary amendment.

**IN THE SPECIFICATION**

Please insert the attached Sequence Listing at the end of the specification. Support for the amendment can be found throughout the application as filed, for example in Figures 1 and 2 and Tables 1-4. No new matter is added. A computer-readable copy and a paper copy of the identical Sequence Listing have been submitted this day under separate cover in response to a Notice to File Missing Parts.

Please replace the paragraphs at page 3 line 28 through page 4 line 4 with the following:

-- Figure 1 is a graphical representation of the relationship between a probability matrix and a constraint vector of this invention. After a probability matrix is generated, a constraint vector can be applied to the matrix to determine which amino acid substitutions will be selected to test for their effect on a desired functionality. An artificial subtilisin sequence [SEQ ID NO: 2] is depicted as being used to generate a probability matrix, which then is subjected to the application of a constraint vector. In this graphical representation, the residues for which values calculated by the matrix rise above the constraint put on by the vector are candidates for the library.
